

α ALFAGRES

Quarry tile for real life 2026

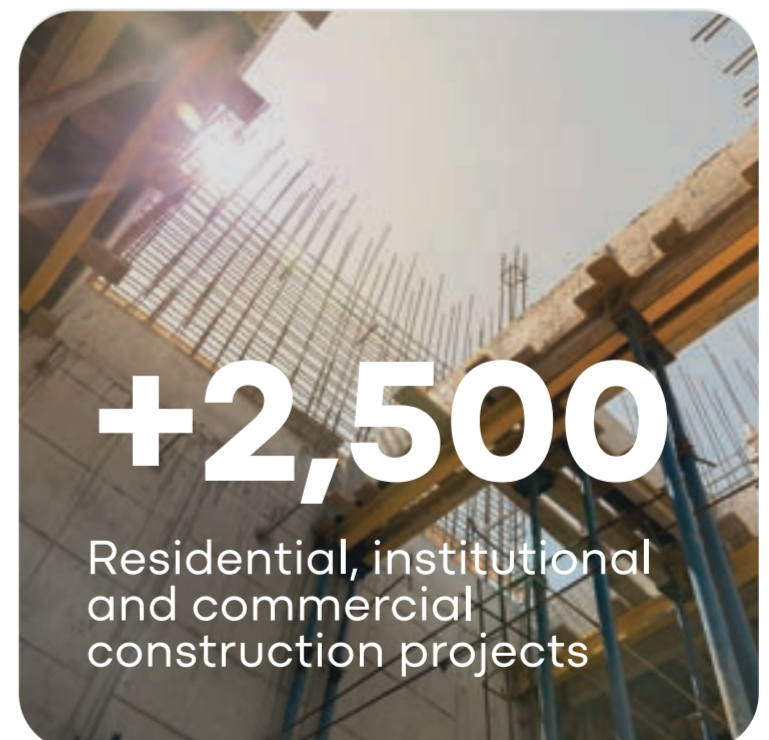

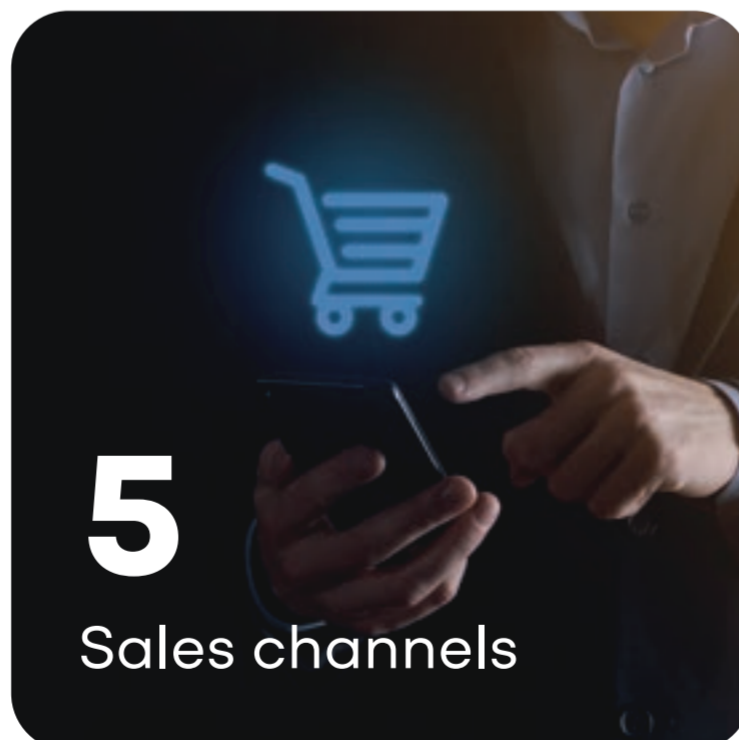

Designing the Future...

At Alfa, we learn from the constant evolution of real life. We understand the present to anticipate what lies ahead and design a sustainable future, staying true to who we are. Because every decision we make has a purpose: Caring for real life.

We care for Real Life

Our organization

Alfagres sustainable vision

In our efforts to define a clear path towards sustainability, we have a commitment that goes beyond the generation of economic value. We are devoted to making each person's Real Life much better, creating environments that cares for that Real Life, thus contributing to the construction of sustainable cities and communities.

With focus on contributing to a better future, we promote change through three strategic principles:

Value creation for real life

We innovate and develop sustainable products and solutions for spaces that transform people's lives.

Real life for the planet

We adapt our processes to make efficient use of natural resources, proactively contributing to global challenges.

Real life for people

We are committed to making everyone's real life better, both for our people and for our communities.

We care for real life

Designing a sustainable future today

At Alfagres, we understand the present, anticipate what is ahead, and design a sustainable future with a clear purpose: caring for real life. This guides every decision we make, from our factory to your projects.

Sustainability in action

The Power of Dry Milling: From day one, we pioneered dry milling—a decision that, in **2025** alone, achieved:

14,000
tons of

emissions prevented.
Equivalent to the carbon
sequestered by **231,000**
trees in ten years.

38,000
cubic meters

of water saved
Enough to fill more than **15**
Olympic-sized swimming
pools.

Closing the loop: We maximize resource efficiency through our circular manufacturing processes, achieving:

100%
wastewater
recirculation

Ensuring zero industrial
water is discharged into
the environment.

>90%
Of our production
waste is reused

Keeping **thousands of tons**
of usefull materials out of
landfills.

Quarry tile

The experience
come true

The product that best captures how tradition adapts to modern times without losing its essence. Reinventing itself with a combination of traditional techniques and materials, and adding technological tools that provide design and style, resulting in unique, sophisticated, and functional products like our Porcelagres.

As always, and totally different...

Ceramic tiles

Endless design possibilities

Our ceramics reflect the connection between tradition and modernity, offering styles, designs, and textures that bring beauty, calm, spaciousness, and functionality to any space. They are made using advanced technologies such as micro-groove technology, which recreates natural wear and detail to add texture and depth; hyperrealism, which enhances every color, shadow, and detail through the highest-resolution digital printing available on the market; and ultra-gloss technology, which uses a special glaze to achieve intense shine, a greater sense of space, and superior resistance. Additionally, our production process contributes to a more sustainable world through dry milling and low water and energy consumption.

Mix & Match

Design spaces with balance and personality

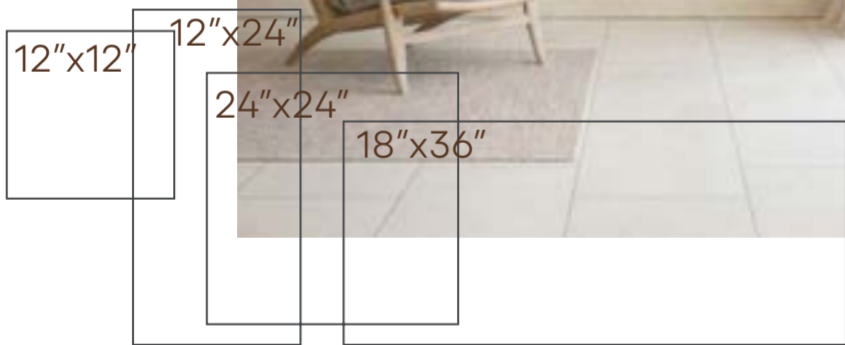

Essence

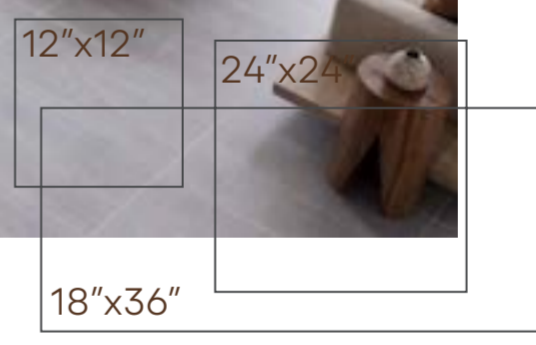

Dune

Strata

Manchester

Contemporary design is no longer just about selecting a material, it's about composing spaces.

With Mix & Match, we invite architects, designers and homeowners to explore a new design approach: combining different formats within the same aesthetic language to create dynamic, elegant and perfectly balanced surfaces.

This collection brings together 4 series inspired by timeless materials such as marble, cement and stone, developed in multiple formats that allow spaces to be modulated with freedom while maintaining visual harmony.

Terrazzo tiles

The colors of life in
an infinite and
unrepeatable material

Tiles that are true works of art, thanks to the timeless elegance of their designs. They represent the perfect combination of colors and textures, bringing a sense of wellbeing to spaces through a unique, infinite, and unrepeatable design. With the added confidence of a floor highly resistant to heavy traffic.

These floors are a promise of lasting relevance and refined taste, while contributing to a more sustainable world, as they are made from recycled glass and produced with low energy and water consumption.

Icon Glossary

Traffic - Surface properties and uses

PEI 2 Light residential traffic with no direct access from the exterior, such as bathrooms.

PEI 3 Light to moderate residential traffic, such as living rooms.

PEI 4 Residential and light commercial traffic such as residential kitchens, hallways and home entrances.

PEI 5 High residential and commercial +
